The iframe / form is working. However, the controller is redirecting from the POST and thus converting the request to a GET.

- Removing the GET option still redirects; it just makes the endpoint return 405
- Replacing the controller code with just a string doesn't change the behavior
- Using a form to ensure that the argument is provided as a GET param doesn't change the behavior

#2 - 11/20/2016 04:52 AM - Luke Murphey

It looks like authentication is failing.

#3 - 11/20/2016 04:59 AM - Luke Murphey

Might need to do something to pass the CSRF token in or disable it for this endpoint:

<https://docs.splunk.com/Documentation/Splunk/6.5.0/Admin/Webconf>

I need to set the X-Splunk-Form-Key header. This can be obtained by calling `Splunk.util.getFormKey()`.
