

ThreatFactor NSIA - Feature #168

Autocomplete URL Filter on New Auto-Discovery Rule Form

07/10/2010 01:08 PM - Luke Murphey

Status:	Closed	Start date:	07/10/2010
Priority:	Normal	Due date:	
Assignee:	Luke Murphey	% Done:	100%
Category:		Estimated time:	0.00 hour
Target version:	1.0 (Release)		
Description			
Auto-completion should be added to the new rule form in order to populate the URL filter for the user.

Below is code to set the URL filter. Needs to be modified to:

- Not throw an exception when the URL is invalid
- Do not replace the domain filter if it is not empty
- Set a filter of * if multiple domains exist

```
function getDomain (thestring) {
    //simple function that matches the beginning of a URL
    //in a string and then returns the domain.
    var urlpattern = new RegExp("(http|ftp|https)://(.*)?(/.*)?$");
    var parsedurl = thestring.match(urlpattern);

    if( parsedurl && parsedurl.length >= 2){
        return parsedurl[2];
    }
    else{
        return null;
    }
}

$("input[name=Domain]").focus( function() {
    urls = cpl.getCode();

    url = urls.split("\n")[0];
    url = getDomain(url);
    $("input[name=Domain]").val("*" + url + "*");
});
```
