I cannot seem to repro this. I wonder if Splunk doesn't see the tour until it is restarted. Many .conf changes will not show up until the host is restarted or the tour manually refreshed.

#2 - 08/25/2017 10:19 PM - Luke Murphey

Ok, I can repro it with this case:

1. Install Website Monitoring (upgrading over the existing install)
2. Do not restart (even though it asks you to)
3. Go to the tour; tour doesn't show up

#3 - 08/25/2017 10:21 PM - Luke Murphey

I take that back. I had the tour stanza wrong in my test.

I indeed cannot repro this, even if I avoid the restart (at least on Splunk 6.6).
