Observations:

- The local server works fine

Questions:

- Does this work locally (not through the reverse proxy)?
 - It does not
- Are any other pages affected?
 - Doesn't appear like it
- What do the logs say?
 - Error related to contenttypes
- What is the content of the MySQL database?
- What version of django is the web-server using?
- Would running the migration help?
- Should an sqlite DB be used?

Possible causes:

- Reverse proxy is passing the request through to static server

Will need to ensure:

- settings.py points to the SQLite DB
- Migration script properly copies over the database
