Description Add feature to edit banner color, perhaps fonts, remove nav bar (which originates from app context) or pick up entire view and place in slideshow context with customization options in how to display. Back store: When rendering Dashboards in slideshow which are saved in the /app/search/ context, IE is changing the green color to a strange undesirable purple which management is not enjoying. Firefox displays in gray, on our systems. We are using the awesome dark feature "Invert Colors"
