Description

Hello Mr. Murphey,

I was really happy to finde a app like this it would solve many of my problems. But I have a problem with your app. I installed it on our splunk server, but I am not able to save any configuration options. Also the internal browser does not work, none of them. And for all these reasons the wen input itself dont work. Because I get every time the same error:
Form authentication failed: Connection failed when loading the authentication form, caused by >>>>

In the log I find this:
Connection failed when loading the authentication form, caused by <httperror_seek_wrapper (urllib2.HTTPError instance) at 0x7f38480bc328 whose wrapped object = <closeable_response at 0x7f3847f8d200 whose fp = <response_seek_wrapper at 0x7f3847f8dfc8 whose wrapped object = <closeable_response at 0x7f3847f8db90 whose fp = <socket._fileobject object at 0x7f3847f86150>>>>"
