May use the offset clause in Apache Derby to do pagination (also supported in MySQL) but not supported in MS-SQL.

JDBC also has methods for setting the absolute row ID in the cursor (using ResultSet.absolute). Another option is to use the CachedRowSet (within the com.sun.rowset.CachedRowSetImp namespace).

#4 - 10/27/2010 11:21 AM - Luke Murphey

Note: if new SQL commands are required, then the Database Requirements page must be updated
