

Website Monitoring - Bug #2341

EOF occurred in violation of protocol (_ssl.c:676)

12/04/2018 05:48 PM - Luke Murphey

Status:	Rejected	Start date:	12/04/2018
Priority:	Normal	Due date:	
Assignee:		% Done:	100%
Category:		Estimated time:	0.00 hour
Target version:			
Description			
From what I can tell, there are several reasons this may happen:			
1. An issue with the underlying SSL libraries used (which are tied to the platform)			
2. An issue with the web-certificate where the protocols are so old that the client cannot resolve a secure protocol to use (https://github.com/requests/requests/issues/3006)			
https://github.com/requests/requests/issues/3391			

History

#1 - 12/04/2018 05:52 PM - Luke Murphey

According to <https://github.com/requests/requests/issues/3006> this can happen when:

Requests no longer supports any of the cipher suites this server supports because they're all either weak or insecure

#2 - 12/04/2018 05:56 PM - Luke Murphey
