

## Website Monitoring - Bug #2341

### EOF occurred in violation of protocol (\_ssl.c:676)

12/04/2018 05:48 PM - Luke Murphey

<b>Status:</b>	Rejected	<b>Start date:</b>	12/04/2018

<b>Target version:</b>			
<b>Description</b>			
From what I can tell, there are several reasons this may happen:			
1. An issue with the underlying SSL libraries used (which are tied to the platform)			
2. An issue with the web-certificate where the protocols are so old that the client cannot resolve a secure protocol to use ( <a href="https://github.com/requests/requests/issues/3006">https://github.com/requests/requests/issues/3006</a> )			
<a href="https://github.com/requests/requests/issues/3391">https://github.com/requests/requests/issues/3391</a>			

### History

#### #1 - 12/04/2018 05:52 PM - Luke Murphey

According to <https://github.com/requests/requests/issues/3006> this can happen when:

```
Requests no longer supports any of the cipher suites this server supports because they're all either weak or insecure
```

#### #2 - 12/04/2018 05:56 PM - Luke Murphey
