<b>Description</b>			
<b>Subtasks:</b>			
Task # 2549: Get docker-based server online			Closed
Task # 2550: Shutdown native server			Closed
Task # 2552: Update static resources			Closed
Task # 2553: Point to new location of static resources			Closed
Task # 2560: Add static resources to media			Closed
Task # 2554: Verify error pages are pointing to the correct sources			Closed
Task # 2555: Update search indexes for new works			Closed
Bug # 2558: admin page doesn't show up			Closed

History

#1 - 06/11/2019 09:48 PM - Luke Murphey

I can update the Perseus docs with this:

```
UPDATE reader_worksource
SET source = 'perseus.tufts.edu',
description='Text provided by Perseus Digital Library, with funding from The Annenberg CPB/Project. Original v
ersion available for viewing and download at http://www.perseus.tufts.edu/hopper/.'
```

And the Biola ones with this:

```
UPDATE reader_worksource
SET source = 'unbound.biola.edu',
description='Text provided by The Unbound Bible from Biola University. Original version available for viewing
and download at http://www.unboundbible.org/.'
```

## #2 - 06/11/2019 09:49 PM - Luke Murphey

Import works per: <https://lukemurphey.net/issues/2419>

## #3 - 06/12/2019 05:43 PM - Luke Murphey

```
from reader.models import Work, WorkSource, WorkAlias
import os

def makesource(work):
    work_source = WorkSource()
    work_source.source = "unbound.biola.edu"
    work_source.resource = ''
    work_source.work = work
    work_source.description = "Text provided by The Unbound Bible from Biola University. Original version available for viewing and download at http://www.unboundbible.org/."
    work_source.save()

lxx = WorkAlias.objects.get(title_slug='lxx')
makesource(lxx.work)

asv = WorkAlias.objects.get(title_slug='asv')
makesource(asv.work)
```

## #4 - 08/13/2019 09:43 PM - Luke Murphey

Should probably download the main database and update it offline.

## #5 - 08/14/2019 04:43 PM - Luke Murphey

- *Tracker changed from Bug to Task*

## #6 - 09/21/2019 04:45 AM - Luke Murphey

Steps:

1. **[Done]** Upload databases
2. **[Done]** Install portainer
3. **[Done]** Create new app directory
  1. **[Done]** Copy indexes
  2. **[Done]** Copy cache
  3. **[Deferred]** Copy statics
  4. **[Done]** Copy files
4. **[Done]** Deploy new upgrade script
5. **[Done]** Start app
6. **[Done]** Redirect port to new app
7. Stop existing app
8. Remove old init script
