Questions:

- Could ordering be the problem?
- Are the results sorted anywhere?
 - update_hash() sort before generating the hash

Observations:

- You can test with this input:
 - | webscrape selector=".grid__cell-content > h2" url="https://www.nomanssky.com/release-log/" depth_limit=25 empty_matches=0
- The match count matches
- The linux host gets an MD5 of b260551723b6ded8951f3c072ba3254b when running the input. However, it gets an MD5 of a320a89e92c6f2d22699d73e496be873 from the search command and from the input on another host.
- The results look the same
- The results hash to the same results in search
 - source="web_input://no_mans_sky_updates" | table _time url match* content_md5 raw_match_count | eval n=mvjoin(match, "") | eval md5=md5(n)
