| <p>Hi,</p> <p>I just wanted to get some clarification. When it comes to the "configuration" parameter under the web_ping input stanza, can it be used to specify no proxy or can I configure a proxy under website_monitoring.conf that will no interfere with the connection?</p> <p>FYI, currently on 2.7.6 from splunkbase. Should I grab it direct from your site?</p> <p>Example website_monitoring.conf:</p> <pre>[default] &lt;----- pretending to be the default proxy proxy_port = 3128 proxy_server = nonexistent.com proxy_type = http thread_limit = 200</pre> <p>[no_proxy] &lt; ----- to be used for addresses that don't need the proxy</p> <pre>proxy_port = proxy_server = proxy_type = http thread_limit = 200</pre> <p>Example inputs.conf:</p> <pre>[web_ping://google_com] &lt; ----- uses [default] proxy config interval = 1m title = <a href="http://www.google.com">www.google.com</a> url = <a href="http://www.google.com">http://www.google.com</a> user_agent = Splunk Website Monitoring (+https://splunkbase.splunk.com/app/1493/)</pre> <p>[web_ping://splunk Local] &lt; ----- uses [no_proxy] proxy config</p> <pre>interval = 1m title = splunk Local url = <a href="http://localhost:8000">http://localhost:8000</a> user_agent = Splunk Website Monitoring (+https://splunkbase.splunk.com/app/1493/) configuration = no_proxy</pre> <p>I just seem to get "Connection timed out" at this stage.</p> <p>I'd also be looking to get a tick box on the input "Create input" panel to choose whether on or to set the proxy ( only based on these two options ). I'm happy to do a little bit of work here, once I get my head around the splunkjs stuff. Any hints would be appreciated :)</p> |        |                        |            |
