Questions:

- Should I include the static resources?
- Should I include the code or use the repo to run it?
 - I could
- How would I transfer the image to the server?
 - I could build it locally; and deploy via <https://stackoverflow.com/questions/23935141/how-to-copy-docker-images-from-one-host-to-another-without-using-a-repository>
 - I can also put it on Docker hub
- How do I deploy it?
 - I could write a script to pull this down and run it
- How do I get the static files?
