collectstatic doesn't currently collect static files for the built-in apps.

Questions:

- How do I get my static files registered?
  - See https://scotch.io/tutorials/working-with-django-templates-static-files
- Why are static files still not getting registered?
- How do I get the container to output the files?
  - Could use nginx: https://uwsgi-docs.readthedocs.io/en/latest/tutorials/Django_and_nginx.html
- How do I get the container to serve the files despite not being in debug mode?
