Observations:

- The current size is 4245619 (4.2 MB). This is too small
- The index is at /usr/src/app/var/indexes (host path /opt/textcritical/indexes)

Questions:

- Can I make more indexes?
- Can I move the indexes over?

Solutions:

- `sudo cp -r /var/webapps/textcritical.com/var/indexes/* /opt/textcritical/indexes/*``sudo cp -r /var/webapps/textcritical.com/var/indexes/* .`
 - This works
- Copy then reproduce the indexes
 - This starts over from scratch

```
sudo docker exec -it sharp_fermi python manage.py make_search_indexes -c
```
