Qs:

- Do the events show up in the server?
    - No, they appear to not be proxying
- Does it work elsewhere?
- Does it work without the content-base?
    - Removed from "start": "webpack-dev-server --open --config webpack.dev.js --content-base public",

Obs:

- I don't see logs for any of the 404s in the server
- The favicon.ico doesn't load either
    - It doesn't load in the actual server either though

Solns:

- Set CORS header
    - http://www.srikanthtechnologies.com/blog/python/enable_cors_for_django.aspx
    - This works
- Run another proxy that changes the headers
