Qs:

- Does queryParams represent the current URL on forward/back?
 - It does
- Why doesn't the page re-render on forward/back?
 - I can call
- What are the the cases I have too handle?
 - Load results on page load
 - Will not load if no results are available
 - Load results on "go"
 - Load results on "next"
 - Load results on "back"
 - Load results on browser next
 - Load results on browser back
- How do I determine if the results are different?
 - The things that could be compared are:
 - state: this is being loaded from the URL and thus matches the URL
 - URL
 - history:
 - match: doesn't work since we are using query params
 - location: key seems to match history

Obs:

- The search doesn't run when the URL is provided
 - See http://localhost:8081/search?q=work:new-testament%20%CE%BD%CE%BF%CE%BC%CE%BF%CF%82&page=2&ignore_diacritics=1&include_related=1 *
