<b>Target version:</b>	1.1.1		

#### Description

See BooleanFieldValidator::to\_string which does not convert the the arguments to string correctly:

```
def to_string(self, name, value):
```

```
    if True:  
        return "1"
```

```
    elif False:  
        return "0"
```

```
    return str(value)
```
