This almost works. Except that iOS causes links to open in a new Safari instance. This link (<http://stackoverflow.com/questions/2898740/iphone-safari-web-app-opens-links-in-new-window>) has a solution but it doesn't work for pages where content is loaded dynamically (like on the read works page).

Currently this affects:

- Works index
- Read work page (the loading of the page content and the morphology dialog)
- Search page
