Description			
The notes are not rendered very well yet. Consider the first chapter of Aemilius Paulus By Plutarch:			
<pre> ἐμοὶ with Bekker, after Stephanus and Reiske: ἐμοὶ μὲν. </pre>			
I would like to use either popovers or tooltips .

The HTML5Converter class takes a node_transformation_fx. Overriding this should allow some level of customization. However, the content of the

tootips and popovers is supplied by an attribute, not the content.

The current text transformation system is good at changing node names but difficult to use for taking contents that may need to be processed on the text transform and moving it into an attribute.
