Here are some plugins that can turn input into a tags:

- <http://welldonethings.com/tags/manager>
- <http://texttextjs.com/>
- <http://xoxco.com/projects/code/tagsinput/>

I wonder if I could remove the work\_id field by indexing both the title and the title slug in the work field. This would only cause a problem if a work has a name that is entirely subsumed by the name of another work. I guess this does happen already since some works (like speeches) have a name that is subsumed by other works.
