Target version:			
Description			
Need to create help documentation for NSIA.			

History

#1 - 04/08/2010 11:32 PM - Luke Murphey

The options for creating help include:

1. Use the [Django CMS](<http://django-cms.org/>) to create free form help pages.
2. Write the help pages statically in templates.
3. Write the help pages in a knowledgebase system

Ideally the system would provide the following:

- Hierarchical structure
- Search
- Article meta-data (last updated, etc.)
- Ability to order articles
- Ability to include images and attachments

Each page should include:

- A treeview of the articles
- Page with the most recently updated articles
- A search box
- A breadcrumb list
- A section for related documents
- Meta-data box with information such as: Date-last edited, Author, Page views, Rating
- Comments section

See the following page for a similar system: http://www.kbpublisher.com/images/Image/screenshot/Admin_UpdateArticle.gif.

Writing a custom solution has a few difficulties (defined below):

- Ordering articles
- Searching
- Uploading images / files

Solution	Auth. Integration	Style Integration	Data Integration	Other
Django CMS	Yes	Yes	Yes	May have some bugs, demo didn't allow articles nested 3 deep
Statically	Yes	Yes	Yes	Cannot be administered dynamically, may difficulty generating article meta-data and tree structure and searching

[Various options](#) exist for providing a CMS in Django.
