

TextCritical.net - Bug #617

Search results sometimes produce broken links to works

08/04/2013 07:56 PM - Luke Murphey

Status: Closed	Start date: 08/04/2013
Priority: Normal	Due date:
Assignee: Luke Murphey	% Done: 100%
Category:	Estimated time: 0.00 hour
Target version: 1.0	

Description
Some search results are not accessible since the verse marker is not recognized.

Steps to reproduce:

- Go to Genesis 1 in the LXX (<http://textcritical.net/work/lxx/Genesis/1>)
- Click "οὐρανὸν" to do a search in the LXX
- Click search result for Esther 4:17c: note that link fails

History

#1 - 08/06/2013 03:56 AM - Luke Murphey

There are two versions of Esther in the LXX. The second instance has the same name as the first which generates confusion. I suspect this is why the references are failing.

#2 - 08/06/2013 03:56 AM - Luke Murphey

- Status changed from New to In Progress

#3 - 08/06/2013 04:14 AM - Luke Murphey

The problem is that there are two Esther's:

```
select * from reader_division where title = "Esther"
```

The solution is to change the title of the second Esther to something like "Esther (Greek)":

```
update reader_division set title_slug="esther-greek", descriptor="Esther-Greek" where id = 31318
```

#4 - 08/06/2013 04:23 AM - Luke Murphey

This indeed fixed the problem. Now I need to update the searches indices.

#5 - 08/06/2013 05:48 AM - Luke Murphey

Reimporting with:

```
python manage.py import_unbound_bible -f ../var/resources/Unbound_Bible/lxx_a_accents/lxx_a_accents_utf8.txt
```

This was done after deleting the LXX:

```
delete from reader_work where title_slug = "lxx"  
delete from reader_workalias where title_slug = "lxx"
```

#6 - 08/06/2013 06:35 AM - Luke Murphey

The existing index for LXX was deleted using:

```
from reader.contentsearch import WorkIndexer  
from whoosh.qparser import QueryParser  
  
inx = WorkIndexer.get_index()  
parser = QueryParser("content", inx.schema)  
inx.delete_by_query(parser.parse(u'work:lxx'))  
writer = inx.writer()  
writer.commit(optimize=True)
```

The indexes were rebuilt using:

```
python manage.py make_search_indexes -w lxx
```

```
from reader.models import Work  
from reader.contentsearch import WorkIndexer  
works = Work.objects.filter(title_slug="lxx")  
work = works[0]  
WorkIndexer.index_work(work)
```

#7 - 08/06/2013 07:32 PM - Luke Murphey
