

ThreatFactor NSIA - Feature #70

Silent Installer

04/08/2010 11:55 PM - Luke Murphey

Status: Rejected	Start date:
Priority: Low	Due date:
Assignee:	% Done: 0%
Category: Installer	Estimated time: 0.00 hour
Target version:	
Description Might be nice if the NSIS installer had a silent mode for unattended installation.	

History

#1 - 04/08/2010 11:55 PM - Luke Murphey

A silent would need to take either command-line arguments or a configuration file for the following:

- Default username
- Password

A silent installer should use the **IfSilent** function to skip message-boxes. "IfSilent +2" instructs NSIS to move two lines forward from the current line (or skip the next line).

Furthermore, the installer should parse the required fields arguments from the command-line or out of a ini file.
