**Description**

Add the ability to define a value that can be used for setting the name of field.

For example, consider this HTML:

```
<div id="model">Focus</div>
<div name="submodel">ST</div>
<div name="make" id="car">Ford</div>
```

If the setting the names attributes to "name,id" would cause the following output:

```
model=Focus submodel=ST make=Ford
```
