History

#1 - 01/12/2015 07:01 PM - Luke Murphey

What is known:

- Hashing the stanza name doesn't reveal the same hash
- Not all inputs are affected

Questions:

- Why are some inputs affected?
- What is the content of the stanza name?
- Why is a new directory not being made?
- Why are json files 32 characters long (that implies md5, not sha224)
